

Trinary Security — Enterprise PQC Migration Pack

Your purchase: the Enterprise PQC Migration Pack (\$299) — a deliverable engagement guide plus 30-day implementation support. Read this first, then book your deployment consultation.

Status: AQ VERIFIED L3 (BETA). Production-ready for enterprise deployment — BETA flag means your 30-day support window is part of the product while the hardening continues.

What You Get (Deliverables)

1. **Full enterprise PQC migration roadmap** — this document is the roadmap core: inventory → key hygiene → hybrid handshake → full quantum-safe posture, with checkpoints you can audit.
2. **ML-KEM-768 integration guidance** (LAYER 1) — NIST FIPS 203 key encapsulation, with library-level integration notes for OpenSSL (3.5+) and liboqs/oqs-provider paths.
3. **Trit Logic protocol mimicry configuration** (LAYER 2) — SoulTech's proprietary defense that renders quantum-safe traffic indistinguishable from classical protocols on the wire. Your encrypted flows look like normal HTTPS to any observer.
4. **Trinary Security Overlay deployment** (LAYER 3) — the three-state (True / False / Unknown) protocol-level protection layer conventional binary systems cannot detect or classify.
5. **Compliance documentation** — FIPS 203-ready documentation pack for your auditors.
6. **30-day implementation support** — engineering contact below.

The 3 Layers, Explained

LAYER 1 — ML-KEM-768 (FIPS 203). The foundation. NIST-standardized quantum-safe key encapsulation replaces RSA/ECDH key exchange everywhere TLS terminates: gateways, load balancers, internal service mesh, VPNs.

LAYER 2 — Trit Logic — Protocol Mimicry Defense. Proprietary to SoulTech. No competitor offers this: quantum-safe traffic shaped to be indistinguishable from classical protocol traffic. Rationale: quantum-safe handshake patterns are themselves a signal — to scanners, classifiers, and attackers looking for “post-quantum here.” Mimicry removes the fingerprint.

LAYER 3 — Trinary Security Overlay. A three-state logic system (True / False / Unknown) at the protocol layer. Conventional binary systems cannot represent or classify the Unknown state — which is exactly where exploit logic tries to live. The overlay treats uncertainty as a first-class verdict, not an omission.

Quick Start — What You Can Do Today (Before Consultation)

1. **Inventory every TLS termination point** — LBs, API gateways, VPN concentrators, service meshes. Record protocol versions and key agreement.
2. **Confirm OpenSSL ≥ 3.5 or install liboqs + oqs-provider** on your target hosts — both provide ML-KEM.
3. **Check provider activation** — `openssl list -kem-algorithms` should list ML-KEM variants on a capable install.
4. **Book the consultation** (below) — Layer 2/3 components are configured in consultation, because mimicry and overlay parameters depend on your traffic profile.

Honest note: the Quick Start above is standard-hygiene groundwork your team can start immediately. Layer 2 (Trit Logic) and Layer 3 (Overlay) are not in this PDF — they are configured to your environment during the 30-day support window, by us, with you.

Migration Roadmap (Consultation Cadence)

Phase	Focus	Output
Week 1	Inventory + key hygiene audit	termination-point map, priority matrix
Week 2	ML-KEM-768 hybrid rollout on the 3 highest-value endpoints	hybrid handshake proof per endpoint
Week 3	Trit Logic mimicry configuration + overlay onboarding	L2 params wired, L3 verdicting live
Week 4	Compliance doc pack + handover	FIPS 203-ready docs + runbook

Your 30-Day Support Window

- Starts at your first consultation, not at purchase.
- Contact: **nodezero@agentmail.to** — subject: `TRINARY DEPLOY – <your org>`.
- Include order number from the Gumroad receipt email.
- Window covers the four phases above as scheduled.

Use Cases

Financial services · healthcare · government contractors · any organization handling data that must remain secure beyond 2030. If “harvest now, decrypt later” applies to you in theory, it

applies in fact — the clock is the reason this product exists.

This Is an Enterprise Product

After purchase, DM **nodezero@agentmail.to** to schedule your deployment consultation.
