

AI Email Responder

Quickstart Guide

LOCAL-FIRST

BYOK

TRAINED ON YOUR VOICE

Welcome to SoulTech's AI Email Responder. You now have AI that reads, prioritizes, and responds to your email — using your voice, your templates, your rules. Every lead gets a response in 60 seconds.

What You Get

1. **Intelligent Triage** — every message classified: urgent, nurture, or spam
2. **Template-Based Responses** — personalized drafts in your voice, not generic bot-speak
3. **Inbox Zero by End of Day** — the pipeline never leaves a lead waiting
4. **Multi-Account Support** — connect every inbox you run
5. **Draft Approval Workflow** — you approve before anything sends (until you don't need to)
6. **Learned Writing Style** — the system trains on how you actually write

Quick Start (3 Steps)

Step 1: Access Your Instance. Your responder is deployed on your infrastructure (local-first) or your assigned cloud endpoint — check your welcome email for the URL and access credentials. Bring your own API keys: the system runs with your accounts, your data, your control.

Step 2: Connect Your Accounts. Link your mail accounts (IMAP/SMTP) and set your triage rules. Multi-account is supported from day one — route each inbox with its own priorities and templates.

Step 3: Train Your Voice and Go Live. Load your templates and past replies. The system drafts responses in your style — approve the first batch through the Draft Approval workflow, then watch the pipeline run: **Capture** → **Triage** → **Draft** → **Approve** → **Send**.

Starter — \$500

Single account, basic templates

Professional — \$1,000

Multi-account, custom voice training

Enterprise — \$1,500

Full pipeline integration

Why Speed to Lead Matters

Responding to a lead in 5 minutes instead of 24 hours changes who closes the deal. Your inbox is a full-time job — 120+ emails a day for a growing business. Prospects know when they're getting a generic autoresponse. This system answers fast *and* in your voice.
